

FEAR

Florida Equipment And Restoration, Inc.

Introducing the *EksoVest*

Utilizing exoskeleton technology to
improve safety and performance

The *EksoVest* is an upper-body exoskeleton that elevates and supports a worker's arms, assisting with tasks performed at chest height or overhead. The lightweight and low-profile design make it comfortable to wear in all conditions, while enabling freedom of motion.

These benefits improve workplace safety and productivity, while reducing worker fatigue.
